

LUCAS VIEIRA BUENO E SILVA

Full Stack Developer

[LinkedIn](#) | [GitHub](#) | lucasvbs12@gmail.com

SUMMARY

Full Stack Developer with 3+ years of experience in web and mobile development, with strong expertise in Artificial Intelligence solutions. At MJV Technology & Innovation, I developed AI agents that reduced software integration time from 8 weeks to 1 week and achieved 80% performance in audit analyses. Solid experience with React, Next.js, NestJS, TypeScript, and Azure OpenAI, with a proven track record in agile teams (Scrum/Kanban), clean code, SOLID principles, design patterns, and system architecture (BFF, Clean Architecture). Recognized by technical leadership as a proactive, committed professional with strong adaptability and a continuous-learning mindset.

PROFESSIONAL EXPERIENCE

Full Stack Developer — New Code

Apr 2026 – Present

Project: SGD Municípios, an electronic document and case management platform for municipal governments in Tocantins

- Developed end-to-end features in a modular monolith using NestJS, Prisma, and PostgreSQL on the backend, and React 19, Vite, TanStack Query, and Tailwind CSS on the frontend, within a TypeScript monorepo with shared contracts validated via Zod.
- Implemented multi-tenancy with Row Level Security (RLS) in PostgreSQL to isolate each municipality's data, and built automated tests to guarantee tenant isolation.
- Built the AI document ingestion pipeline (OCR text → chunking → local embeddings) with an asynchronous queue, batch reprocessing (backfill), and enforcement of each document's confidentiality level.
- Developed the notification engine and a transactional email queue with retry logic using pg-boss and SMTP, along with the document signature request queue.
- Built operational reports with CSV export and role-based access control (RBAC), including processing-time metrics measured in business days.
- Implemented security and access flows: account lockout after 5 failed login attempts, email-based password reset, self-registration for public servants, an authorized-CPF allowlist, and an access approval queue.
- Delivered core case-management modules: configurable NUP numbering, tabbed case viewer, attachments, document templates, automatic distribution, and a retention/archiving policy (TTDD).
- Improved application accessibility and UX with keyboard navigation, visible focus states in the menu, reorganized navigation into groups, and responsive layout fixes.
- Ensured quality with unit and e2e tests (Jest, Vitest, Supertest, and Playwright), versioned migrations with rollback scripts, and CI/CD pipelines on GitHub Actions, deploying to a VPS via Docker Compose.
- Worked with Scrum and Jira, Git flow (feature → dev → main), Conventional Commits, and code review via Pull Requests.

Full Stack Developer — MJV Technology & Innovation

Jul 2025 – Jul 2026

- Developed AI agents using Azure OpenAI and LangChain, reducing software integration time from 8 weeks to just 1 week.
- Achieved 80% performance in audit analyses through specialized AI agents.
- Created and optimized prompts and system prompts, building solid prompt engineering expertise.

- Built backend services with NestJS and TypeScript, and implemented modern frontend designs in React and Tailwind CSS.
- Consumed and integrated REST APIs, working within agile methodologies (Scrum/Kanban) and version control with Git (GitLab).
- Applied SOLID principles and design patterns in backend development, ensuring organized, testable, and maintainable code.
- Recognized by the Tech Lead for proactivity, commitment, and strong technical adaptability.

Internal Systems Developer — CI&T

Mar 2025 – Jul 2025

- Collaborated with the development and QA teams to build and maintain web systems using Next.js, NestJS, and Spring Boot.
- Applied clean code and SOLID principles in the development of a management application for supervisors.
- Contributed to the architecture of a BFF (Backend for Frontend) to optimize communication between services, applying design patterns for decoupling and scalability.

Systems Developer — Max Data Sistemas

Jul 2024 – Feb 2025

- Developed web and mobile systems using Angular and Bootstrap.
- Provided critical support for commercial automation, assisting clients with complex financial and legal matters.

Web Developer — qActive Tecnologia e Marketing

Nov 2023 – Apr 2024

- Created and maintained websites using WordPress and PHP, solving real business problems and improving performance.
- Established a recurring revenue model through maintenance contracts and delivered custom visual identities for clients.

Participant — Campus Mobile — Claro

2024

- Developed TEAMO, a React Native application focused on the inclusion and safety of children with ASD (Autism Spectrum Disorder), providing greater peace of mind for parents.

SKILLS

Technical: Next.js, React.js, React 19, React Native, Node.js, Express.js, NestJS, TypeScript, Vite, TanStack Query, Zod, Prisma, Azure OpenAI, LangChain, Angular, Bootstrap, Tailwind CSS, WordPress, PHP, Spring Boot, Flutter, SQL Server, PostgreSQL, MySQL, pg-boss, Git, GitHub Actions, GitLab CI/CD, Docker, Jest, Jasmine, Vitest, Supertest, Playwright, Jira, Scrum, Kanban.

Architecture & Best Practices: SOLID Principles, Design Patterns, Clean Code, Clean Architecture, BFF (Backend for Frontend), Microservices Architecture, Multi-tenancy, Row Level Security (RLS), REST APIs.

Soft Skills: Adaptability, Effective Communication, Time Management, Proactivity, Problem Solving, Teamwork.

Languages: English (Intermediate), Spanish (Basic).

EDUCATION

Bachelor's Degree in Software Engineering

Ulbra Palmas — 2021 – In Progress (expected graduation Dec 2026)
